Colour coding makes it fast and accurate

Numerical indexing for accurate organisation

At a glance colour coding remains the key for both numerical and alphabetical references.

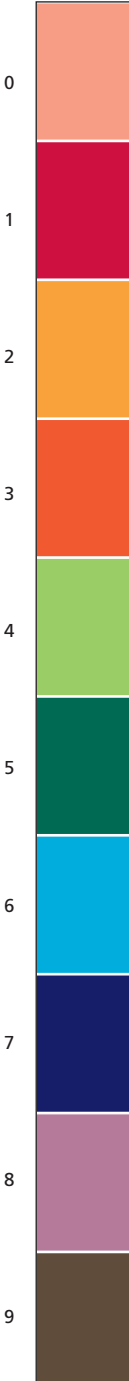

All the numbers you need for super-accurate filing of numerical records.

Look how effectively the system works! The minute you put a file in the wrong spot, your eye lets you know...no more searching for a file that should be in one place, but is hiding somewhere else! Because each file is unique and works within the colour band, you'll know the minute one is out of place!

Whoops! A misfile? But not for long.

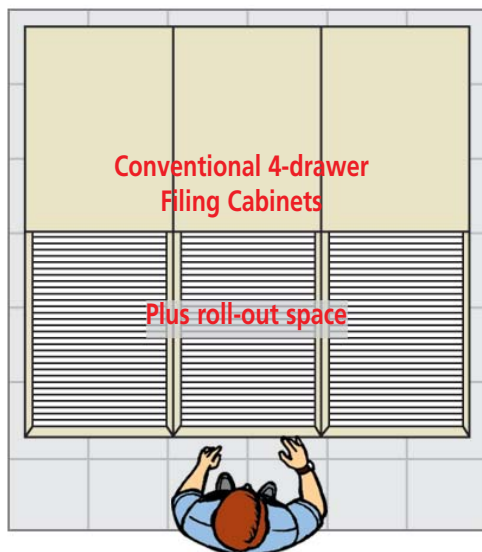

Make the best use of your floor space

Look at the space you'll save...and every file is visible

You'll be amazed! FileQuest storage units occupy a fraction of the space of old-fashioned filing cabinets – you'll save floor space of up to 75% – and space costs money! FileQuest upright cabinets will revolutionise your office and release space you never realised you had!

Your FileQuest consultant will help you design and plan a layout to maximise your floorspace... and position your new cabinets to provide easy access.

You'll fit all this filing...

into this space!

Based on a FileQuest 7-level Flipper door cabinet

A variety of file supports available

FILING SYSTEMS

UNIQUE SLOTTED SHELVING SYSTEMS

Specially designed for maximum storage capacity:

- Filing capacity equivalent to 4 1/4 four-drawer cabinets.
